

Couples: the welfare decomposition

FINAL_COUPLES_PROVISIONAL_PENDING_ECONOMICS_REVIEW. Bars are SIGNED and are not renormalised. Whiskers are leave-one-scramble-out jackknife bands ($t = 2.3646$, 7 df). Channel A's quadrant limb is structurally inert: the joint participation-regime law carries no household covariate in this specification, so A carries the access shifters only. The access density may combine personal capability and market availability; it does not yet separately identify A_i from O_i .
